# Weather Survey Task

This week, your task is to take temperature readings every day. You can use your smartphone weather app, or maybe you have a thermometer.
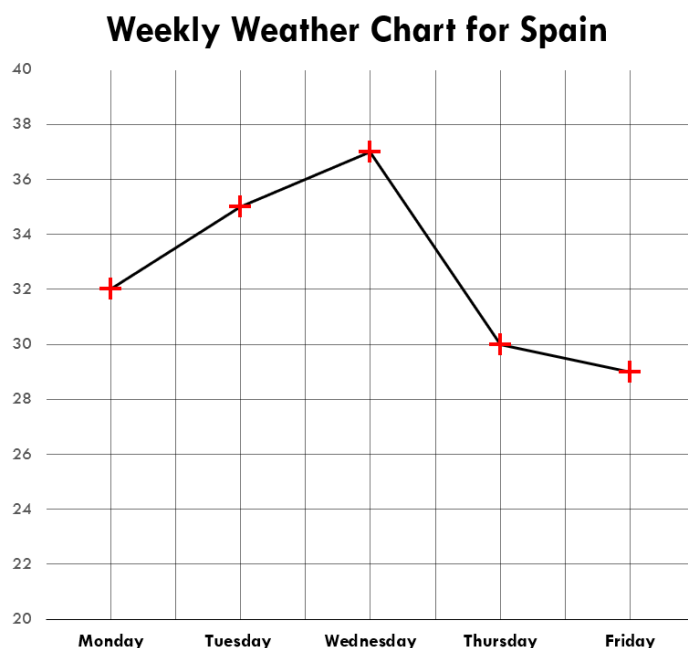

Write your results into the table, and then plot the line graph.

If you want an extra challenge, you could -

Weekly Weather Chart

- Draw your own graph and table using a ruler
- Display the data in different ways. Is there another type of graph or chart you could use?
- take two readings every day, once in the morning and once in the evening

As you can see, I have put in an example of Spain's temperature below. Notice how the points in the graph look. I have used a + to mark the point on the graph.

Weekly Weather Chart for Spain

	Temperature (°C)
Monday	32
Tuesday	35
Wednesday	37
Thursday	30
Friday	29
